

USER MANUAL

UD Series | Thermal Sensor Disks

WARRANTY

First Year Warranty

The Gentec-EO thermal disk carry a one-year warranty (from date of shipment) against material and/or workmanship defects when used under normal operating conditions. The warranty does not cover damages related to misuse.

Gentec-EO will repair or replace at our option any disk which proves to be defective during the warranty period; except in the case of product misuse.

Any unauthorized alteration or repair of the product is also not covered by the warranty.

The manufacturer is not liable for consequential damages of any kind.

In the case of a malfunction, contact your local Gentec-EO distributor or the nearest Gentec-EO office to obtain a return authorization number. Return the material to the appropriate address below.

Contacting Gentec Electro-Optics Inc.

To help us answer your calls more efficiently please have the model number of the disk you are using ready before calling Customer Support.

1. ULTRA SERIES UD DISK

1.1. INTRODUCTION

The Gentec-EO UD power detector series includes five opto-thermal sensors (UD10, UD12, UD19, UD25 and UD55). The high power surface absorber sensors are designed for use at high average power densities.

Unit	Aperture	Power range
	mm	
UD10	10	0.1 mW to 2 W
UD12	12	1 mW to 70 W
UD19	19	0.2 mW to 200 W
UD25	25	10 mW to 250 W
UD55	55	5 mW to 700 W

For Gentec-EO's nearest office contact information, see p. ii, Contacting Gentec Electro-Optics Inc.

1.2. WARNINGS AND DISCLAIMER

In no event shall Gentec-EO or any of its affiliates be liable for any indirect, special, incidental or consequential injury to persons or damage to property caused by the use of any of our products, by purchasing from Gentec-EO or any of its affiliates, you hereby indicate that you understand and agree to the following:

Disclaimer

I am fully responsible for the safe application and use of this product and agreed to such by completing the sales process.

I will not use a laser device without wearing approved laser safety goggles designed for such purpose.

I am aware and responsible of safely dealing with any back reflections. I will not use the detector in violation of any local, state or federal law, and I understand that it is my responsibility to know and abide by those laws relating to the ownership and use of the product in my jurisdiction.

1.3. SPECIFICATIONS

The following specifications are based on an operating temperature of 15 to 28°C (59 to 82°F) and a relative humidity not exceeding 80%. Disks must be stored in an environment between 10°C to 65°C and a relative humidity not exceeding 90%.

2. MOUNTING AND COOLING RECOMMENDATIONS

Important: Never touch directly the absorbing surface of the thermal disk

2.1. COOLING

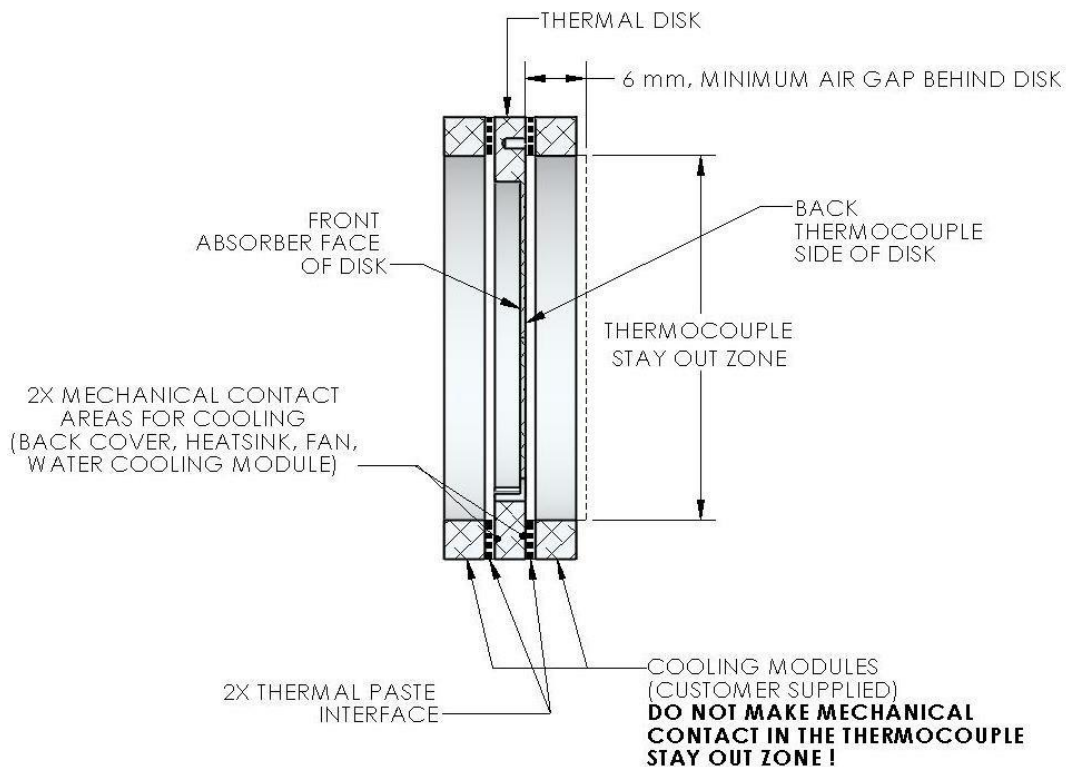

The type of cooling (back cover, heat sink, fan, water) and the size of the cooling plate depend on the power applied on the thermal disk. Contact Gentec-EO to discuss your specific application.

Warning: The thermal disk temperature should never exceed 150 °C

2.2. COOLING PLATE

The thermal disk should be supported by the cooling plate only on the edge of the thermal disk. The cooling plate rim should be made out of a material with a high thermal conductivity. It should also be flat and smooth to allow a good thermal contact with the disk. There should be a gap of at least 6 mm between the back of the disk and any other surface.

THERMAL DISK CONFIGURATION

2.3. THERMAL DISK MOUNTING

Before mounting the thermal disk in place, a thin film of thermal paste (For example: Wakefield Engineering Inc. thermal paste part no. 120-2.) should be applied on the support rim. Put the disk in place and turn it gently so that a good thermal contact is made between the disk and the support rim. (Be careful not to damage the contact pins.) The thermal disk must be maintained in place from the front (do not apply thermal paste on the front of thermal disk).

2.4. LASER BEAM

The laser beam should always be centered with respect to the center of the thermal disk. The beam diameter should always be smaller than the optical aperture of the disk.

3. SAFETY INSTRUCTIONS

3.1. GENERAL

To ensure a long lifetime of accurate measurements, the thermal disk should be maintained within the following ambient conditions:

Storage environment temperature: 10 to 60°C, RH < 90%
Operating environment temperature: 15 to 28°C, RH < 80%.

WARNING: Be careful not to exceed the maximum levels and densities stated in the specifications.

It is possible to store and operate your thermal disk beyond this range. For any specific requirements, please contact your local Gentec-EO representative.

For the most accurate measurements, center the beam on the sensor.

3.2. DAMAGE TO THE OPTICAL ABSORBER MATERIAL

Damage to the optical absorber material is usually caused by exceeding the manufacturer's specifications, such as:

- Incident Average Power Density
- Incident Pulse Energy Density

Refer to the specifications pages for the UD disk specifications. Damage may also be caused if the absorber surface is contaminated. A slight discoloration of the coating does not affect the calibration.

In any case, the beam's incident area should not be less than 10% of the disk's aperture. Please contact Gentec-EO to make measurements with such smaller beams.

In the event of significant damage to the coating, some UD Series disk can be recoated. Contact your local Gentec-EO representative for information on repair. See p. ii Contacting Gentec Electro-Optics Inc.

DECLARATION OF CONFORMITY

WEEE compliance

All Gentec-EO products comply with the European Directive 2012/19/EU – WEEE.

RoHS compliance

All Gentec-EO products comply with the European Directive 2011/65/EU – Restriction of Hazardous substance (RoHS 2), except TPM-300.

APPENDIX A: WEEE DIRECTIVE

Recycling and separation procedure for WEEE directive 2002/96/EC

This section is used by the recycling center when the UD disk reaches the end of its life.

The complete thermal disk contains:

1 thermal disk
